

1 Input

a network and a short description

NATURAL-LANGUAGE DESCRIPTION

"Friendship network among 12 students in one school year. Each student belongs to a club and a grade cohort..."

2 FORGE

the LLM proposes; code and statistical checks decide

VALID-TERM MENU (L^*)

Only terms this network supports: edges, gwesp, nodematch("club"), gwdegree, ...

LLM · PROPOSES

Candidate formulas as structured JSON, restricted to L^* , with expected signs

CHECKS · DECIDE

Quick fits rank candidates; ✗ invalid and ✗ unstable formulas are rejected

ONE CHECKED REVISION

A single edit, kept only if the model stays stable, fit improves, and BIC drops

3 Output

a checked model, explained

SELECTED MODEL

```
friendship ~ edges
+ gwesp(0.5) + gwdegree(0.5)
+ nodematch("club")
+ nodematch("grade")
```

PLAIN-LANGUAGE EXPLANATION

"Friendships are more likely within clubs and grade cohorts, between friends-of-friends, and around a few well-connected students — associations, not causes."

✓ GOF checks pass · BIC 96.4 → 66.8
